

Acknowledgements

As a truly cooperative effort, this publication involves the contributions of many individuals and institutions in different phases of a knowledge-sharing initiative. We would like to express our appreciation to all of them.

The present volume stems from a partnership between the Third World Network of Scientific Organizations (TWNSO), the Third World Academy of Sciences (TWAS) and the UNDP Special Unit for South-South Cooperation (SSC). The knowledge-sharing process that led to the series, *Sharing Innovative Experiences*, and the publication of the volumes are initiatives of the Special Unit for SSC and are funded as a component of its WIDE project. Following the methodology of WIDE, selected authors are invited to participate in a workshop, where some of the case studies presented meet the criteria for publication. This process was effectively implemented by TWNSO and TWAS. The knowledge-sharing workshop was held at the headquarters of TWNSO in Trieste, Italy, from 3-6 February 2004.

The 17 case studies presented in this volume were prepared by the scientists involved in the workshop and we thank them for their openness and enthusiasm in sharing their work. The workshop was also attended by two guest speakers, Alan Hamilton, head of the International Plant Conservation Unit of the World Wildlife Fund (WWF), and Jihad Noun of the International Plant Genetic Resources Institute (IPGRI) in the Syrian Arab Republic, both of whom presented an overview of the work of their respective organizations and how it relates to medicinal plants. We would like to express our gratitude for their participation.

Daniel Schaffer, TWAS Public Information Officer, and Francisco Simplicio, UNDP Special Unit for SSC Information Management Specialist, managed the initiative and coordinated the partnership to bring the volume to publication. Peter McGrath, who works for the TWAS Public Information Office, adapted the texts to the case-study structure reproduced here and ensured that these studies are accessible to a wider, non-technical audience.

Helen Martin and Cristina Simoes of the TWNSO secretariat provided the administrative assistance that enabled the project to stay on track despite the challenges posed by its global reach and wide-ranging activities. Lourdes Hermosura-Chang of the UNDP Special Unit for SSC provided logistical support for the publication and Barbara Brewka, an independent professional commissioned by the Special Unit, carried out reviews during the publication phase.

This volume would not have been possible without the commitment and efforts of the Advisory Board:

- *Gautam R. Desiraju*, School of Chemistry, University of Hyderabad, India;
- *Inga Hedberg* and *Olov K. Hedberg*, Department of Systematic Botany, Uppsala University, Sweden;
- *Lydia P. Makbubu*, Swaziland Institute for Research in Traditional Medicine, Medicinal and Indigenous Food Plants, University of Swaziland, Kwaluseni, Swaziland; and
- *Gloria Montenegro*, Professor of Botany, Pontifical Catholic University of Chile, Santiago, Chile, and Chair of the Advisory Board.

The talent and commitment of each member of this diverse group helped to move this initiative forward efficiently and effectively. We express our thanks to them all.
