Introduction	11
<b>Section one</b>   From flora to pharmaceutical	<b>15</b>
<i>Case studies in this section are presented by institutions that cover the whole drug development process, from identifying and purifying potentially useful compounds in plants, to verifying their efficacy, to the final production of commercial pharmaceutical products.</i>	
1 Roadmap to commercialization: <b>Costa Rica</b>	17
2 Drug discovery and development: <b>India</b>	29
3 Promoting herbal drugs: <b>Thailand</b>	45
<b>Section two</b>   Scientific validation	<b>57</b>
<i>Case studies in this section are involved with the chemical extraction and analysis of natural products and/or determining their pharmacological properties using batteries of rigorous laboratory tests.</i>	
4 Neem seed oil: <b>Bangladesh</b>	59
5 Neutralizing snake venoms: <b>Costa Rica</b>	64
6 As pure as possible: <b>India</b>	72
7 The case for cat's claw: <b>Peru</b>	81
8 Of maca and men: <b>Peru</b>	89
9 Antioxidants from olives: <b>Tunisia</b>	101
<b>Section three</b>   Traditional knowledge	<b>109</b>
<i>Case studies in this section highlight the role that traditional knowledge can play in improving the health of people.</i>	
10 The multi-purpose Moringa tree: <b>Ethiopia</b>	111
11 Establishing a herbal clinic: <b>Kenya</b>	119
12 Validating traditional knowledge: <b>Rwanda</b>	127
13 Battling bilharzia: <b>Swaziland</b>	135
14 Fighting addiction: <b>Viet Nam</b>	145
<b>Section four</b>   Wild and cultivated sources	<b>155</b>
<i>Case studies in this section focus on wild and cultivated sources of medicinal plants, from protecting vast tracts of an ecosystem in China, to searching for wild alternatives to a widely cultivated medicinal plant, to the use of tissue culture and botanical gardens to multiply and protect medicinal plants.</i>	
15 Sustaining herbal supplies: <b>China</b>	157
16 The role of biotechnology: <b>Jamaica</b>	164
17 Focus on local alternatives: <b>Jordan</b>	177
